

NASA Aeronautics Research and Analysis

Project Title	NASA Aeronautics Research and Analysis
Project Summary	Join NASA’s Aeronautics Research Mission Directorate in transforming the future of aviation! Help NASA analyze publications and organize literature reviews to enhance our research.
Country	United States

Project Description

Do you enjoy researching and learning about engineering, aviation, and aeronautics? Do you have experience with organizing citations and analyzing complex documents? NASA is exploring new ways of providing assistance to our researchers, and we need your help. The Aeronautics Research Mission Directorate seeks e-Interns to support our work in knowledge management and information management by designing and developing ways that researchers can streamline their information finding activities. You’ll review research publications and other materials, tag and catalog them, and help us figure out how best to organize and share the data. As feasible, we would also welcome experimental analysis and the application of natural language processing or artificial intelligence methodologies. You may also be invited to join team meetings virtually and to share your work from this project with other NASA colleagues and partners.

Required Skills or Interests

- Skill(s)
- Analytical writing
- Data analysis
- Editing and proofreading
- Research
- Website design
- Writing

Additional Information

None

Language Requirements

None
